

MACIEJ MAZUR

Curriculum Vitae

Front-end developer / architect

Experience

Casumo

Remotely for Malta since 2018

Front-end developer in one of the most innovative online casino brands in the industry. Ensuring our product remains regulation-compliant in engaged markets. Helping to guide the evolution of company software.

Maintanance and growth of the backoffice administration panel

knockoutjs, react, bower, sass, gulp, bootstrap, durandal

Maintanance and growth of the online casino features

typescript, react, webpack, babel, redux, tailwind, websockets, storybooks, design system, unit tests, REST

Eventually taking up the mantle of a **software architect** and **technical leader** in order to deliver a second generation of Casumo UI.

Leading a technical team to implement a new system architecture

npm, parcel, vite, svelte, sveltekit, react, web components, automation, leadership, technical recruitment

Future Processing

Poland 2011 - 2018

Over seven years of work in a software outsourcing company. Exposure to a vast array of technologies and multitude of clients from across Europe. Contribution to public services, media, financial, logistics and healthcare related projects. Assigned to clients individually or in teams with up to 60 members.

Performing role of a **senior front-end developer** using mainstream javascript solutions. Some of the more unconventional projects have required usage of niche languages, full-stack work or delivery of cross-platform UI among other unorthodox techniques.

Front-end developer in multiple, cross functional teams

scrum, mentorship, javascript, angular 1.6, backbonejs, knockoutjs, material design, design systems, nodejs, .NET, REST, MVC and MVVM, git and svn, CI/CD, clean coding

Goodpoint

Poland 2010 - 2011

Rapid design and delivery of websites for small and medium sized companies. Client contact, offer negotiations and IT support. Mostly PHP MVC frameworks code and related - **first experience** with professional software development.

Core competencies

Expect from me:

Over 10 years of experience in the development of modern web applications, along with some experience in high level front-end system design and setup.

Over 10 years of experience in JavaScript, CSS and HTML usage along with some recent typescript exposure.

Vast experience with CSS solutions. I have used preprocessors such as SASS or LESS and methodologies like BEM, SMACSS or atomic design. I have relied on material design, bootstrap or tailwindcss.

Vast experience with modern javascript libraries and tooling such as vue, react, svelte or original angular 1.6. I am familiar with state management systems such as redux, redux sagas, redux toolkit or vuex and principles behind those. I can also be a bit nostalgic about the older libraries such as knockout or backbone.

Experience with design systems. I have relied on external UI concepts such as material design, bootstrap and others, but I have also cooperated with designers to implement a bespoke system. I can reason about usability, extend existing patterns and adhere to design principles.

Experience with build level tools. I have engaged in the setup, configuration and optimisation of the older (grunt, gulp) as well as the more recent (webpack, vite, rollbar, parcel) generation of bundlers.

Experience with testing and quality control tools. I consider unit tests and storybooks as foundational elements of modern UI development and use them extensively. I have some limited history of doing test driven development and writing end to end tests to cover critical user journeys.

Experience with technical processes. I am a practitioner of semantic versioning, user of git version control and npm package system. CI/CD, slack, github and discussions during a code review are not alien concepts to me.

Experience with management processes. I have been operating in loose and strict agile teams, in scrum and kanban setups. I can iterate in a self-encapsulated sprint, but I also believe in the power of long-term planning and roadmaps. I have strong self-organizational, analytical and communication skills to deliver those.

Some experience with not-so-front-end development. I have a history of building nodeJS services, experimentation with noSQL databases such as couchDB or firebase and some rudimentary experience with linux systems in order to setup nginx hosting. I did some heroku. I can reason about basic cloud services too.

An aesthetics and usability oriented mindset. I enjoy planning, reasoning about, implementing and refining user interfaces. I am happy to take ownership of parts of the application and deliver a quality solution for our end-user needs.

Personal information

born	15-07-1988 - 35 years old
location	Gliwice, Poland
timezone	central european time - CET or CEST
civil status	married / two kids
remote work	yes, can occasionally travel on-site
can invoice	yes - owner of a company
